ABSTRACT:

Delayed speech in children is a prevalent developmental issue that can significantly impact social, emotional and cognitive growth. This article explores the multifaceted nature of delayed speech examining its potential causes, including hearing impairments, developmental disorders, and environmental factors. Emphasizing the need for early intervention, we highlight homeopathy as a holistic management approach that considers the child's individual symptoms and overall well-being. Homeopathic remedies are selected based on a thorough assessment of the child's personality and specific challenges, aiming to stimulate natural healing and improve communication skills. This article aims to provide insights into effective homeopathic strategies, emphasizing their role in not only promoting speech development but also enhancing the child's confidence and emotional health. By addressing the underlying issues and fostering a supportive environment, homeopathy can be a valuable component in the comprehensive management of delayed speech in children.

KEY WORDS:

Delayed speech, Homeopathy, language, developmental delay, anatomy
