**ABSTRACT:**

Urinary tract infections (UTIs) are one among the most common bacterial infections seen in primary care and has become a major medical problem. UTI can be asymptomatic or symptomatic, characterized by a wide spectrum of symptoms ranging from mild irritating voiding to bacteraemia, sepsis, or even death. Although, antibiotic treatment supports clinical cure in some patients, at the same time it also leads to emerging resistance rates in the population. Studies have shown that one in 7 patients given an antibiotic for UTI symptoms will return within 28 days for a further prescription of antibiotic. Thus in view of increasing prevalence of antibiotic resistance and recurrence of symptoms, there is a strong need for rapid, gentle and permanent cure of this condition, and this can be achieved through Homoeopathy
