Abstract:

A 60 year old patient with unsatisfactory mandibular denture and resorbed ridge was treated with single mid symphyseal mandibular implant overdenture. The treatment involved surgical placement of implant followed by a period of 2 months for osseointegration. After 2 months of healing, the denture was fabricated. A regular follow up was done for 6 months to see the outcome of the treatment plan.

Key words: Overdenture, Implant, Mandible, Denture
