Abstract

The present case report describes the fabrication of an interim immediate complete denture for a patient with compromised periodontal support of the remaining dentition. Three techniques for cast medication for fabricating immediate denture has been advocated. The patient has been successfully treated applying the spatial modelling technique for cast modification. Thus, with the immediate denture prosthesis, the aesthetics, phonetics, muscular tone and psychological status of the patient were successfully managed.

Key Words: Conventional immediate denture, Interim immediate denture, spatial modelling technique, Standard technique, Jerbi's technique.
