ABSTRACT

Smile, the first contact in human relationship. To meet the challenges of rehabilitating anterior teeth and achieving natural-looking restorations, it is essential to address issues such as improper shape, size, and unesthetic shades. The increasing demand for aesthetically pleasing and metal-free solutions has popularized materials like dental zirconia, offering optimal aesthetics and desirable mechanical properties. This case report highlights the prosthetic rehabilitation of endodontically treated anterior tooth with layered zirconia fixed dental prosthesis.

KEYWORD Aesthetic crown, Maxillary anterior tooth, Layered zirconia, Fixed dental prosthesis.
