ABSTRACT

The significance of denture labelling has been recognized globally as a forensic identification. Labelled dentures aids in personal identification in case of disaster, accident or murder. It facilitates denture identification, in situations of loss, accidental misplacement, or for forensic purposes. Several techniques for denture marking are available. This case report details on a simple, economical, easily identifiable denture labelling technique by incorporating patient's photo in the dentures. It aids as an easy denture identification and also an effective forensic identification in case of natural or man-made disasters.

KEY WORDS

Denture Labelling, Denture Marking, Personal Identification labelling, surface marking, denture identification.
