ABSTRACT

Reconstruction of mutilated dentition with multiple missing teeth and worn dentition, using fixed or removable prosthesis, has been a long standing challenge to a dentist's skill and capabilities over the years. The main objective of the performed treatment in this clinical case study was to eliminate the teeth sensitivity, enhance esthetics and restore masticatory function. This article describes anterior teeth rehabilitation of a young adult male patient who was diagnosed with Generalized Aggressive periodontitis.

Keywords: Anterior Rehabilitation, Aggressive Periodontitis, Fixed prosthodontics, Porcelain fused to metal.
