ABSTRACT

Esthetics is a pivotal part of the complete denture prosthodontics. As age progresses, the loss of tonicity of the intraoral musculature result in slumping of the cheeks. Various prosthesis has been invented in the search for the finding the best cheek prosthesis but detachable cheek prosthesis has surely shown significant promise in providing adequate comfort and patient satisfaction as they can be used as per the patients will. The present article discusses a novel technique for fabrication process of an intraoral detachable cheek prosthesis using double die pins attachments that have been fabricated with a complete denture prosthesis.

Key words: cheek plumper, facial esthetics, sunken cheeks
