**Abstract**

Unilateral removable dentures are always less stable this is because they do not have the effect of cross arch stabilization. Attachment retained RPD is a viable alternative approach as it benefited a significant number of patients. Precision attachments have long been considered the highest form of partial denture therapy. It is an alternative reconstructive option that does not involve complex procedures for the patient. It is a combination prosthesis with fixed and removal partial denture connected with the help of precision attachments. They provide better retention and support.

**Keywords:** Unilateral removable denture, Precision attachments, retention.
