ABSTRACT:

Oral verrucous carcinoma (VC) is a form of well differentiated squamous cell carcinoma characterized by exophytic over growth and is a slow growing and locally invasive tumor. Oral submucous fibrosis (OSMF) is a potentially malignant disorder associated with chronic betel nut chewing habit. Malignant changes in patients with OSMF most commonly seen is in the form of oral squamous cell carcinoma (OSCC) but the development of VC is rare in such patients. There are very few cases of OSMF with VC reported in literature. Here we present a rare case of a middle aged patient with VC in association with OSMF.

Keywords: Verrucous carcinoma, oral submucous fibrosis, oral squamous cell carcinoma, potentially malignant disorder
