Abstract

Stewart, Foote, and Becker in 1945 coined the term “mucoepidermoid tumour to describe an unusual salivary neoplasm containing epidermoid and mucus-secreting cells which was thought to arise in salivary gland ducts. This case presentation is of a 55 years old patient Anuradha who reported to the department with the chief complaint of swelling on right side of palate that was slightly crossing the midline. The patient also had a history of tumour in the same region which was removed around 15 years back. On biopsy the patient was diagnosed with Mucoepidermoid Carcinoma and the treatment was planned accordingly.
