### Abstract:

Digital photography has multiple significance and represents a contemporary dentistry. Its application in dental practice has become simple, quick and extremely useful in documentation of cases, effectuating the education of patients and clinical investigations. In recent years as the technology is emerging, some of the smart phone camera technology has come on leaps and bounds in recent years, which are indeed capable of producing images comparable to those from today's high end cameras with an image quality which a full frame DSLR can deliver, On the other hand the technical aspect of DSLR and Mirror less cameras have also been increasing as to significantly provide better image quality than even as the best smartphones, as well as offering high quality interchangeable lenses that makes it multidextran.

This article reviews the comparative features of iPhone and DSLR imaging and its application in Dentistry.
