ABSTRACT

Accurate final impression of the prepared teeth is of extreme importance for successful fixed prosthetic restorations. One of the problems appearing in the process of the impression making is the marginal details. Taking an accurate impression requires appropriate tooth preparation and soft-tissue management followed by proper selection of impression material, system, tray and the impression technique. A variety of materials and methods have been described in literature for the retraction of gingival tissue. This article outlines the high qualities of a new, preventive and improved, temporary retraction materials and techniques.

KEYWORDS- Gingival displacement, Advances in Gingival Retraction, Tissue Goo
