ABSTRACT

Oral sub mucous fibrosis is an insidious chronic disease and a precancerous condition, affecting any part of the oral cavity and sometimes the pharynx, caused by prolonged use of tobacco, areca nut, spices etc. It is often associated with limited mouth opening due to increased fibrosis. This case report describes the oral rehabilitation of a case of grade 2 oral sub mucous fibrosis and failing teeth with an implant supported full mouth fixed prosthesis using multiunit abutments.

Keywords; *all on four, multiunit abutments, full mouth rehabilitation, oral sub mucous fibrosis,*
