ABSTRACT

In daily clinical practice, aesthetics of anterior teeth is a common presenting complaint of patients. Researchers and clinicians have directed their interest towards the esthetic solutions to provide naturally colored, durable, long-lasting restorations that society currently demands. This esthetic direction seems to afford the patient a sense of health, safety, self-esteem. There has been rapid development in the field of esthetic dentistry.

Since its emergence into the dental arena, Zirconia has increasingly become the material of choice for clinicians who wish to provide their patients with the most technologically advanced metal-free restorations.

Keywords: restorative, esthetic dentistry, Zirconia
