**ABSTRACT**

Prosthodontics is a elaborative subject that requires detailed learning and designing of the procedure for which the undergraduates will be adequately trained especially during their first and second year preclinical classes. Due to the breakout of COVID -19 global pandemic, online classes were implemented for all the institutions globally including the dental institutions. This brought a changeover in the learning and teaching methods and the students were in need to adapt to the online classes. Preclinical classes being laboratory oriented was very challenging for the students in understanding and learning the procedure that focused the need to evaluate the effectiveness of online preclinical classes.
