**Abstract:**

The success rate of dental implants has increased tremendously due to various research in techniques in minimising surgical complexity and increasing survival. Dental implants which are osseointegrated are effective in rehabilitation of partial or total edentulous patients. In order to avoid bone augmentation or grafting procedures, alternative way is the use of short dental implants. This is a case report where all-on four concept is been used both in maxilla and mandible in case of complete edentulism. Short implants are used in maxilla and standard implants are used in mandible. Hybrid dentures are given as definitive prosthesis.

**Keywords:** short and standard dental implants, all-on four concept, hybrid dentures
