### ABSTRACT:

In last nine months, COVID-19 has speedily distended across numerous countries. It's an animal disease that is believed to have originated from bats and pangolins and later transmitted to humans. Human transmission occurs via respiratory droplet/contact. WHO declared COVID-19 as a pandemic because of the frightful levels of spread and severity. This article aims to provide brief information about Prosthodontic patient management and clinical strategies against COVID-19. It discusses roles and precautions of each and every person present in the clinical area during this pandemic COVID-19.
