ABSTRACT:

Missing teeth in anterior region has the most aesthetic challenge in dentistry as tooth loss leads to bone resorption and collapse of gingival architecture, further leading to aesthetic compromise. Immediate implant placement into fresh extraction socket reduces the time, cost, preserves the gingival aesthetic and increases the comfort of the patient. This article describes the procedure for immediate implant placement in fresh extraction socket and early loading of implant with temporary prosthesis. Immediate placement and early loading of dental implant provides advantages like fewer surgical procedures, improved aesthetic, shorter treatment time and psychological confidence and preservation of soft tissue collapse.

KEYWORDS: Immediate Implant, Immediate loading, Temporary Prosthesis, CBCT, Osteotomy.
