ABSTRACT:

Introduction:

The knowledge about relation between skin and human psychology did not develop now but already mentioned in Greeko Arab literatures. Now a day, Skin problems often results in psychosomatic and psychosocial disorders like stress, depression, anxiety, suicidal tendencies etc. The aim of this study is to evaluate the relations between skin conditions and patients' emotional state and quality of life.

Methods: Literatures available in Greeko Arab and contemporary medicine regarding skin diseases and psychiatry were reviewed to gather relevant information.

Conclusion:

This comparative literary study based on its interrelation between skin diseases and psychiatric disorders. The available literature should be explored further in critical way to pave the way for advancements in both field.
