Therapeutic Effects of the Minocycline in The Treatment of Periodontal Disorder

Dr. Ravi Dongare, Dr. Kunal Shah

Email Id: serviceheb@gmail.com

ABSTRACT:

To examine the healing effects of the application of minocycline in periodontal disorder. Values of dental plaque in relation first examination, tenth, twentieth day, 1 month, showed that after 1 month, average value of dental plaque in second group is barely less than the value of dental plaque in the first group. The average value of gingival inflammation in second group is significantly less than the value of gingival inflammation in the first group. The normal value of gingival bleeding in patients from the first group was considerably higher as compared to gingival bleeding in the second group.

Patients whose treatment was assisted by a sub-dose minocycline demonstrated positive healing effects on gingival inflammation and bleeding.
