### **ABSTRACT:**

Tuberculosis Herbal medicine has been used for centuries in traditional medicine for its therapeutic properties, and its integration into modern oral surgery practices is becoming increasingly prevalent. Herbs and plant-based substances offer a variety of benefits, such as reducing inflammation, managing pain, promoting healing, and preventing infection. This article explores the most commonly used herbs in oral surgery, their potential applications, and the scientific evidence supporting their use. Despite their promising benefits, the article also addresses the safety concerns and interactions with conventional pharmaceutical treatments, urging dental practitioners to exercise caution when incorporating herbal remedies into patient care.

**Keywords:** Herbal medicine, oral surgery, inflammation, postoperative recovery
