ABSTRACT:

Oral squamous carcinoma (OSCC) which is a very common malignancy of oral cavity is a multifactorial disease with alcohol and tobacco as a major risk factors. OSCC is almost every time associated with a potentially malignant disorders which after long standing and un-intervened gets transformed into malignancy. Oral submucous fibrosis (OSF) is one such potentially malignant condition with potential for malignant transformation. Malignancy alongside OSF presents as a distinct disease with different prognosis and needs a strict management and follow up protocol. Here we present one such case of a middle aged patient with OSCC alongside OSF.

Keywords: oral squamous cell carcinoma, potentially malignant disorder, oral submucous fibrosis.
